Dem: What are the fuctions of the skin

The skin is the largest organ of the body. When unbroken, the skin protects the inners from mechanical injury & bacterial infection. It also protects inner liquid from drying out. It is an organ of sensation as that nerve endings embedded in it detect changes in pressure, pain or touch. It also assists the kidneys in the excretion of urea & uric acid. It helps to regulate body temperature. It regulates salt, water, urea, uric acid.
